EduPulse SMT Privacy Policy (Ghana - Act 843)

Effective Date: May 31, 2026

This Privacy Policy explains how EduPulse SMT ("EduPulse SMT", "we", "us") collects, uses, discloses, and protects personal data when schools, staff, students, and guardians use the EduPulse SMT platform (the "Service").

This policy is designed primarily to comply with Ghana's Data Protection Act, 2012 (Act 843). Where practical, EduPulse SMT may also apply stricter operational safeguards inspired by widely adopted international privacy standards, but Ghana law remains the primary legal baseline for Ghanaian school operations.

When a school completes registration on EduPulse SMT, that registration action confirms acceptance of this Privacy Policy and the Data Retention and Deletion Policy as part of onboarding.

During registration, the school must also be shown a clear notice that EduPulse SMT may create de-identified, aggregated educational datasets from lawfully supplied school records for benchmarking, national or regional trend analysis, curriculum research, system optimization, and related educational insights, subject to the safeguards in this policy and the Data Processing Agreement.

1. Who We Are

Controller: EduPulse SMT for platform-operated data such as account, billing, security, support, and product records. For school-originated student, guardian, academic, attendance, admissions, report-card, and examination records, the school is ordinarily the primary data controller and EduPulse SMT acts as its processor or service provider. Contact: danielasareanyinam2020@gmail.com Address: [Insert Registered Address]

2. Personal Data We Collect

We collect data necessary to provide the Service, including:

- School and account data: school name, school ID, contact details, subscription plan.
- Staff data: name, email, phone, role, login credentials.
- Student data: name, student ID, class, academic records, attendance.
- Admissions data: parent-submitted learner profiles, application forms, supporting documents, status updates, and school review notes.
- Document-intelligence data: report-card images or PDFs, parsed academic fields, confidence or exception flags, and related review actions.
- Examination and academic analytics data: internal assessment marks, school-uploaded WAEC or BECE result lists, subject performance history, trend-analysis outputs, and benchmarking outputs derived from public aggregate reports.
- De-identification and aggregation outputs: anonymized statistical records, cohort summaries, regional benchmarks, curriculum-gap indicators, and research datasets generated after direct identifiers and direct school identifiers are removed from source records.
- Parent/guardian data: name, phone, email (if provided by the school).

- Consent and compliance records: acceptance of policies, admissions acknowledgements, migration-consent records, and other notices or approvals required for lawful educational processing.
- Usage data: login events, device info, IP address, audit logs.
- Payment data: transaction references, invoices, receipts, subscription billing metadata, and where a school uses EduPulse SMT payment flows, structured payment references and related payment-status metadata. We do not store full card details. Payments are processed by Paystack.
- School verification data (KYB): legal school identity details, registration and tax identifiers, bank account verification details, and screening outcomes processed through configured verification providers.

3. Legal Basis and Purpose

We process personal data to:

- Provide the Service (lesson notes, grading, reporting, communication).
- Support admissions workflows, including parent-submitted learner profiles, supporting documents, and application status tracking.
- Parse and normalize report-card files or images that a school uploads or submits for educational administration and academic analysis.
- Import and analyze school-supplied external examination records, including WAEC or BECE result lists, where the school has the legal authority to provide them.
- Produce school-level academic intelligence such as subject trends, cohort summaries, performance decline alerts, internal benchmarking, academic guidance, and comparisons against lawfully available regional or national aggregate statistics.
- Generate anonymized, aggregated educational analytics across multiple schools for regional, district, and national benchmarking, curriculum research, product improvement, and educational trend reporting where the source data has been irreversibly de-identified and cannot reasonably be linked back to an individual student or a named school.
- Maintain security and prevent fraud.
- Provide support and system notifications.
- Meet legal and regulatory requirements.
- Manage subscriptions, billing, and receipts.

For student data, the school is the primary data controller and EduPulse SMT acts as a data processor on the school's behalf in most operational contexts.

Schools are responsible for ensuring that they have an appropriate legal basis before uploading student records, admissions materials, report-card files, historic academic files, WAEC or BECE result lists, or continuous-assessment records to EduPulse SMT. Where consent is the chosen legal basis, the school must obtain and retain that consent before using the Service for that purpose.

Where EduPulse SMT creates anonymized macro-analytics datasets from school-supplied academic records, EduPulse SMT will first apply de-identification controls designed to remove direct identifiers, persistent student identifiers, and direct school identifiers before the data enters the shared analytics layer. EduPulse SMT will use those datasets only in aggregated statistical form and will not intentionally publish or commercialize identifiable student results or named-school performance without a separate lawful basis and explicit contractual authorization.

4. Data Sharing

We share data only with:

- Authorized school staff using the platform.
- Service providers (hosting, email, payment processing) under strict contracts.
- Verification providers used for school KYB screening under strict contracts and lawful processing controls.
- Examination or education-sector counterparties only where lawfully required, school-authorized, or supported by a formal approved integration.
- Regulators or law enforcement if legally required.

Key third-party processors currently include:

- Paystack: school name, school contact email, subscription amount, transaction references, billing metadata, and authorized school-payment metadata where applicable. Purpose: payment processing, billing, and receipts. Location: Nigeria. Privacy Policy: https://paystack.com/privacy
- Meta (WhatsApp Business API): parent or guardian phone numbers and message content where a school uses WhatsApp delivery. Purpose: educational communications and alerts. Location: United States or other Meta processing locations subject to Meta's contractual safeguards. Privacy Policy: https://www.whatsapp.com/legal/privacy-policy-eea
- Google (Gmail SMTP or related email infrastructure): email addresses and email content for transactional delivery. Purpose: notifications, admissions follow-up, receipts, and operational email. Location: United States or other Google processing locations subject to Google's contractual safeguards. Privacy Policy: https://policies.google.com/privacy
- Configured KYB or verification providers: school legal-identity, registration, tax, banking, and screening details. Purpose: school verification, fraud prevention, and compliance screening. Location: depends on configured provider and contract.

Where anonymized macro-analytics outputs are shared with customers, researchers, or the public, those outputs must remain aggregated and must not identify an individual student, guardian, staff member, or named school unless a separate lawful disclosure basis exists.

We do not sell personal data.

We may create and use anonymized statistical information that no longer identifies a person or specific school for lawful educational benchmarking, research, service improvement, and commercial analytics products.

5. Data Retention

We retain data as needed to provide the Service and comply with legal obligations. See our Data Retention Policy for details.

6. Security Measures

We use industry-standard controls including:

- Encryption in transit (TLS)
- Access controls and role-based permissions

- Audit logging
- Regular backups

7. Data Subject Rights (Act 843)

Individuals have rights to:

- Access their data
- Correct inaccurate data
- Request deletion (subject to legal obligations)
- Object to certain processing

Requests can be sent to danielasareanyinam2020@gmail.com. We will respond within the statutory period.

8. Children and Minors

EduPulse SMT is used by schools. Student data is processed under the school's authority and for educational purposes only.

Where a parent or guardian submits data directly through an EduPulse SMT admissions or parent-facing workflow, that submission constitutes an instruction to process the data for admissions review, educational administration, and related follow-up communications.

Where a school migrates pre-existing student records into EduPulse SMT, the school is responsible for using an appropriate legal basis and any notices or consent forms required under Act 843 or other applicable sector obligations.

Where a school imports WAEC or BECE result data for school-level academic analytics, the school must ensure the import is limited to legitimate educational purposes, kept confidential, and not reused for unrelated marketing or public disclosure.

Where a school uploads report cards, admissions documents, or external exam materials for parsing or analysis, the school must ensure those materials were collected lawfully, disclosed appropriately to the relevant families or data subjects where required, and limited to legitimate educational administration purposes.

Where those materials are later included in EduPulse SMT's macro-analytics program, EduPulse SMT will process them only after applying irreversible de-identification and only for aggregated educational trend analysis, benchmarking, curriculum insights, system optimization, and research-style reporting.

Examples of permitted anonymized outputs include region-level pass-rate comparisons, private-versus-public trend summaries, district benchmarking bands, or curriculum-gap analysis across broad cohorts. EduPulse SMT should avoid publishing small-cell or narrow-segment outputs that could reasonably permit re-identification of a student or a specific school.

9. Aggregated Analytics and Data Reuse

EduPulse SMT may maintain a separate analytical environment or data warehouse for de-identified academic and operational statistics derived from lawfully uploaded school records.

Before data is moved into that analytical environment, EduPulse SMT will apply technical and organizational controls intended to:

- remove student names, admissions identifiers, contact details, exact dates of birth, and similar direct identifiers;
- remove or generalize direct school identifiers where only regional, district, school-type, or other broad segmentation is needed;
- prevent benchmarking outputs from exposing raw identifiable performance data for a named student or named school unless separately authorized; and
- keep the shared analytics environment logically separated from the live transactional system where practicable.

The resulting anonymized and aggregated datasets may be used to generate:

- regional, district, and national educational performance trends;
- curriculum or subject-gap analysis;
- benchmarking dashboards for subscribing schools;
- statistical reports, white papers, and system-improvement insights; and
- commercial analytics products based on non-personal data.

While each school retains ownership of its raw identifiable records, EduPulse SMT may own the intellectual property rights in the resulting anonymized, aggregated datasets, benchmark models, visualizations, and analytical outputs to the extent permitted by applicable law and contract.

10. Cross-Border Transfers

If data is stored or processed outside Ghana, we ensure adequate protections and contractual safeguards.

Cross-border storage or support arrangements do not reduce the school's obligations under Ghana law. EduPulse SMT will use contractual, technical, and organizational safeguards that are appropriate for the sensitivity of minors' academic records.

11. Changes to This Policy

We may update this policy. Material changes will be communicated to schools.

12. Contact
